Quad ATV

EV camera vehicle

The EV "Quad" ATV is a simpler slightly smaller variation of our Kit Car. Purpose built for steady cam and handheld camera tracking shots, as well as remote stab heads. Over all it has a smaller foot print then the Kit Car, making it ideal for narrow sidewalks or trails. The air bag suspension allows the operator to balance the load and maintain a level surface. The unit includes six Mitchell mount points on the cheese plate. Three on the front and three on the back. The holes on the cheese plate are countersunk for convenient rigging. Accessory cart includes speed rail and fittings, various Mitchell mounts, nuts/bolts and safety accessories.
